Education

Visiting Ph.D. student, University of Mannheim Mannheim, Germany. Host Prof. : Lei Li	Nov. 2023 - Present
Ph.D. candidate in Economics, Jinan University Guangzhou, China.	Sept. 2021 - Present
M.S. in Economics, Jinan University Guangzhou, China.	Sept. 2017 - June 2019
B.S. in Management, Guangdong University of Finance Guangzhou, China.	Sept. 2013 - June 2017

Previous Employment

Lecturer, Department of Accounting, Guangzhou College of Commerce	June 2019 - Sept. 2021
---	------------------------

Research Interest

Labor Economics, Development Economics.

Working Papers

2023 Training for Hukou: Evidence from China (with [Shimeng Liu](#) and [Wenquan Liang](#))

Abstract: We exploit a unique feature of migrants' training to get a hukou (household registration). Based on the China Labor-Force Dynamics Survey (CLDS), we find that the participation rate in training has significantly increased after the hukou reform. The higher the hukou requirements, the larger the participation rate of migrants, with training funds more likely to be self-financed. This phenomenon is attributed to getting bonus points related to the hukou system through training. Besides, migrants with less than a bachelor's degree or less than 40 years old are more likely to train. Training for hukou can improve individual income. However, the income increment for migrants is 62.08% less than the natives, coupled with a low skill mismatch. Despite these skill mismatches and less favorable spillover effects, training facilitates the social integration of migrants into their cities of residence. Our paper highlights the misallocation caused by the Chinese-style training motivation and has general implications for other countries.

2024 Trade Liberalization and Labor Market Power: Evidence from China

Abstract: We find evidences of labor market monopsony power from 1998 to 2007 in the Chinese manufacturing labor market, with an average wage markdown of 1.186. There is a declining trend in average markdown rates over time. Import competition exposure is associated with increased labor market concentration, while trade liberalization improves employment and wages but reduces the number of firms. If a firm wishes to attract 1 percent of its local competitors' current employment, it must increase its wage premium by 0.5106 percent. Similarly, if a market desires to attract 1 percent of its local competitors' current employment, it would have to raise its wage premium by 1.1993 percent, indicating that labor mobility across markets requires higher wage compensation.
